Abstract of **JP56058824**

PURPOSE: To insert the decorative member into an injection molded article without shifting a position of an injection molding material by a method wherein the decorative member having an adhesive layer formed thereon is adhered in a metal mold and a resin or the like is injected into the metal mold to mold integrally, thereafter said adhesive layer is removed. CONSTITUTION:On one surface of a film sheet 2, a decorative layer 3 having characters or patterns, an adhesive layer 4 and a layer 5 comprising a material same to a molded article are laminated and, on other surface of the sheet 2, a tape layer 7 having sticking agent layers on both surfaces thereof and a mold release layer 6 are laminated to form the decorative member 1. Subsequently. the decorative member 1 is adhered to a cavity 9 of a fixed metal mold 8 by the tape layer 7 having sticking layers on both surfaces thereof after the mold release paper 6 is peeled and fixed thereon. Next, a movable metal mold 10 is clamped to the fixed metal mold 8 and a synthetic thermoplastic resin or a rubber is injected into the cavity 9 to form a molded article having the decorative member 1 inserted therein and the adhesive layer 7 is removed from the decorative material 1 to obtain the product.

ABSTRACT:

PURPOSE: To insert the decorative member into an injection molded

without shifting a position of an injection molding material by a method

wherein the decorative member having an adhesive layer formed thereon is

adhered in a metal mold and a resin or the like is injected into the metal mold

to mold integrally, thereafter said adhesive layer is removed.

CONSTITUTION: On one surface of a film sheet 2, a decorative layer 3 having

characters or patterns, an adhesive layer 4 and a layer 5 comprising a material

same to a molded article are laminated and, on other surface of the sheet 2, a

tape layer 7 having sticking agent layers on both surfaces thereof and a mold

release layer 6 are laminated to form the decorative member 1. Subsequently,

the decorative member 1 is adhered to a cavity 9 of a fixed metal mold 8 by the

tape layer 7 having sticking layers on both surfaces thereof after the mold

release paper 6 is peeled and fixed thereon. Next, a movable metal mold 10 is

clamped to the fixed metal mold 8 and a synthetic thermoplastic resin or a

rubber is injected into the cavity 9 to form a molded article having the

decorative member 1 inserted therein and the adhesive layer 7
